

Running Microtest as administrator

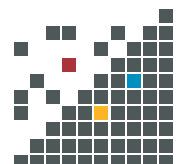

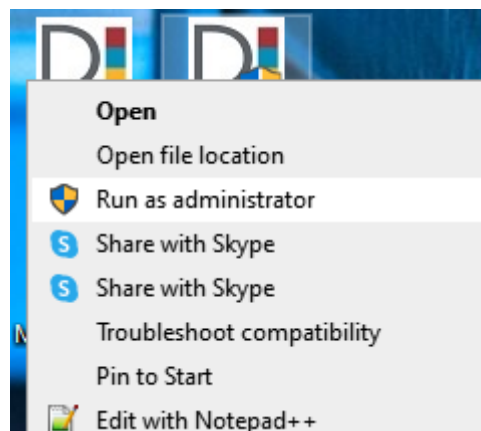

Problem

When starting the Microtest software, error messages appear regarding missing parameter files and modal form run-time errors.

Quick workaround

Right click on the desktop icon and select "Run as administrator".

Full workaround

It is possible to set this to happen automatically by right clicking on the Microtest icon, clicking on Properties, and ticking the “Run this program as an administrator” option in the Compatibility tab.

Also click on the Shortcut tab, click Advanced, and tick the “Run as administrator” option here.
